

### Jensen Dental Releases Jensen WX Millable Dental Wax in 98mm Puck Form

NORTH HAVEN, Conn. – Jensen Dental today announced the release of Jensen WX millable dental wax in 98mm puck form. This is an expansion of their current millable wax, which was previously available only as a frame-based product for Preciso Digital Dentistry Solution. Offering Jensen WX in puck form now makes it compatible with dental mills from a variety of manufacturers.

“The demand for our wax from users of the Preciso Digital Dentistry solution was so high, that we believe there is a significant opportunity to offer the same material we currently offer in a frame, in a form that allows labs with equipment from other manufacturers to produce similar high quality results.” said Joseph Carofano, General Manager of Jensen Dental.

Dental wax is used to create a precise replica of a crown, bridge, coping or framework that is ultimately rendered using the metal casting or pressed ceramic technique. Rather than manually creating wax-ups by hand using modeling wax, the dental lab technician designs the restoration on a PC workstation and computer-aided-design (CAD) software. The completed design is sent to a CNC mill, where the restoration is manufactured out of the Jensen WX wax material, saving time, reducing costs, and improving the consistency and quality of the finished restoration.

Features and benefits of Jensen WX millable wax include:

- Ability to mill thinly without cracking or chipping
- Minimal deformation of patterns for greater accuracy
- Heat stability to prevent melting
- Clean, ash free burn-out during casting
- Delivers smooth castings with minimal tool marks
- Dark color for high contrast between wax and model

Dental laboratories interested in learning more about Jensen WX millable wax, the Preciso Digital Dentistry solution, or other available digital materials can contact Jensen Dental at 800-243-2000 or visit [www.PrecisoDental.com](http://www.PrecisoDental.com).
