

Jensen Dental “Hits the Open Road” with the Preciso Digital Dentistry Solution; Enhancements Include STL Export Capability and the Ability to Mill 98mm Pucks

NORTH HAVEN, Conn. – Jensen Dental announced at Chicago Mid-Winter significant enhancements to the Preciso Digital Dentistry Solution. All Preciso configurations with Preciso CAD Software now have the ability to export STL files, and all Preciso M200 mills have the ability to mill 98mm pucks as an available option.

The Preciso Digital Dentistry Solution is a fully validated, fully open system that includes industry leading equipment, intuitive software for maximum flexibility, and a wide range of materials including 3M™ ESPE™ Lava™ Materials all with unparalleled customer support at an unprecedented value. Preciso is the perfect combination of technology, materials, support, and education designed to help you succeed today and in the future. In addition to 3M™ ESPE™ Lava™ materials, the Preciso Digital Dentistry Solution is validated with Jensen’s XT and HT Zirconia, Jensen Wax, and Jensen PMMA.

Users of the Preciso M200 mill now have the option to mill materials in 98mm puck form, another common form factor in dental milling. Through the use of a patent pending fixture, users of the Preciso M200 mill can easily switch from milling frames in the traditional 3M™ ESPE™ Lava™ Material form to milling 98mm pucks. Customers who purchase an M200 Frame Mill, will also have the option to upgrade to a puck fixture at any time.

“As digital dentistry continues to evolve, our goal is to empower our customers to customize a solution that suits the needs of their lab and their doctors. Although our current customers can mill the vast majority of their restorations using our frame mills which start as low as \$14,995, we now offer the flexibility of both a fully validated and fully open system, all at unprecedented prices.” said Joseph Carofano, General Manager of Jensen Dental.

Dental laboratories looking to learn more about the Preciso Digital Dentistry Solution and how 3M™ ESPE™ Lava™ and Jensen Materials can help differentiate their lab are encouraged to visit www.PrecisoDental.com, a website dedicated to innovative materials, equipment, and education. Visitors to this site can learn more about the various components of Preciso through a variety of resources including white papers, webinars, and ROI calculators. They can also call 800-243-2000 and ask to speak to a Jensen Sales Consultant for a one-on-one consultation on how to achieve beautiful results through digital dentistry.
