

NEWS RELEASE: 11/21/2014

JENSEN's XT Zirconia Road Show Wheels Are Spinning!

North Haven, Conn. –

Jensen Dental's XT Zirconia Road Show team is full speed ahead! With recent stops in Connecticut, Minnesota, and Florida, Jensen is providing customers with the opportunity to sit down with its industry experts face-to-face and walk through a systematic process of coloring, staining and glazing full contour XT Zirconia restorations to produce consistently beautiful results.

Today, more than ever before, dental technicians are being asked to assume greater responsibility for case planning, material selection and processing methods. Digital technologies offer dentistry a growing range of industrially processed materials that exhibit superior physical characteristics such as higher strength and greater wear resistant compared to those processed by hand, expanding the range of applications for traditional materials like ceramic, plastic and composites. In addition, digital technologies are opening new possibilities in communication between dental technologist, dentist and patient, clarifying outcome objectives and expectations for all concerned.

Jensen Dental continues on its mission to provide relative, timely education to its customers on the critical elements for creating highly predictable esthetic outcomes for CAD/CAM provisional's, full contour and layered zirconia restorations, and complex implant cases. For information on roadshow events, seminars, workshops and webinars, visit the Jensen Dental website or contact a Jensen Sales Consultant.

About Jensen Dental
