

Product Highlight: Jensen Dental's New Imagine™ System:

Zirconia, Layering Ceramic, Shading Liquids, Stain and Glaze

"For years I have been looking for a restorative material that mimics the extraordinary beauty of natural dentition, with color and value that are stable even after multiple firings; a material that produces a dense, defect-free surface like tooth enamel, is easy to handle, and can be used on all restoration types. I finally found all of that and more in the Imagine system." Peter Pizzi, MDT

The Imagine System

Monolithic, layered or minimally layered, the Imagine system delivers exceptional results.

Zirconia

Imagine zirconia is 100% digitally processed, as translucent as pressed ceramic, twice the strength of lithium disilicate, and suitable for bridges up to 3 units in length, anterior or posterior.

Imagine Layering Ceramic

Zirconia, lithium disilicate, veneers and titanium; the revolutionary Imagine layering ceramic is the one system that does it all.

Shading Liquid

The optimized shading liquids are easy to apply, provide accurate color control and consistently deliver exceptional lifelike results.

Stain and Glaze

InSync stain and glaze, available in paste or spray, won't streak, puddle or run during application, and always fires crystal clear, never cloudy or grey.

Education

Coupled with Jensen's best-in-class education and support, exceeding every esthetic expectation has never been easier, faster or more predictable.
