How to create a 3D PDF to share a case with your dentist

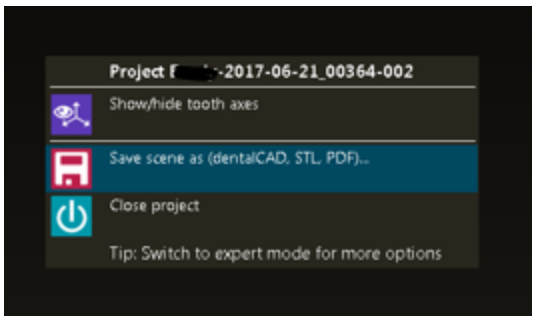
Have you designed a case that you'd like your dentist to see and or approve before you mill it?

Did you know you can save any case as a 3D pdf? You can email the 3D pdf to your dentist who can view the case in all possible directions using Adobe Reader.

Here's how:

View the designed case in Preciso CAD.

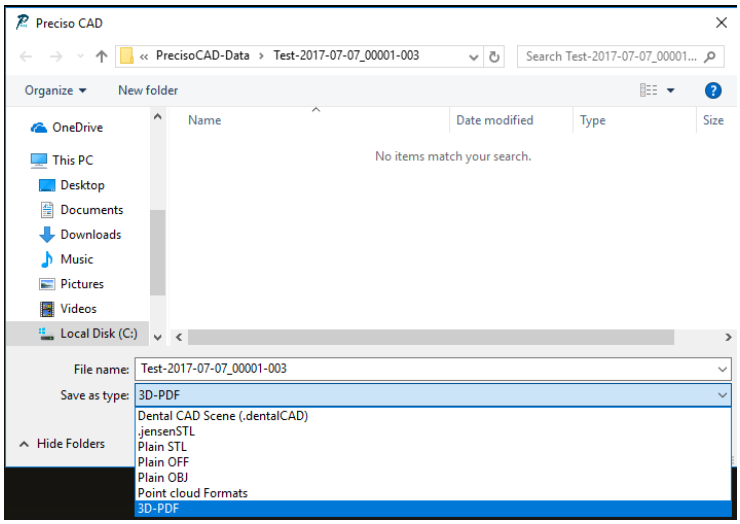
Activate expert mode; right click in the background of expert mode for more options

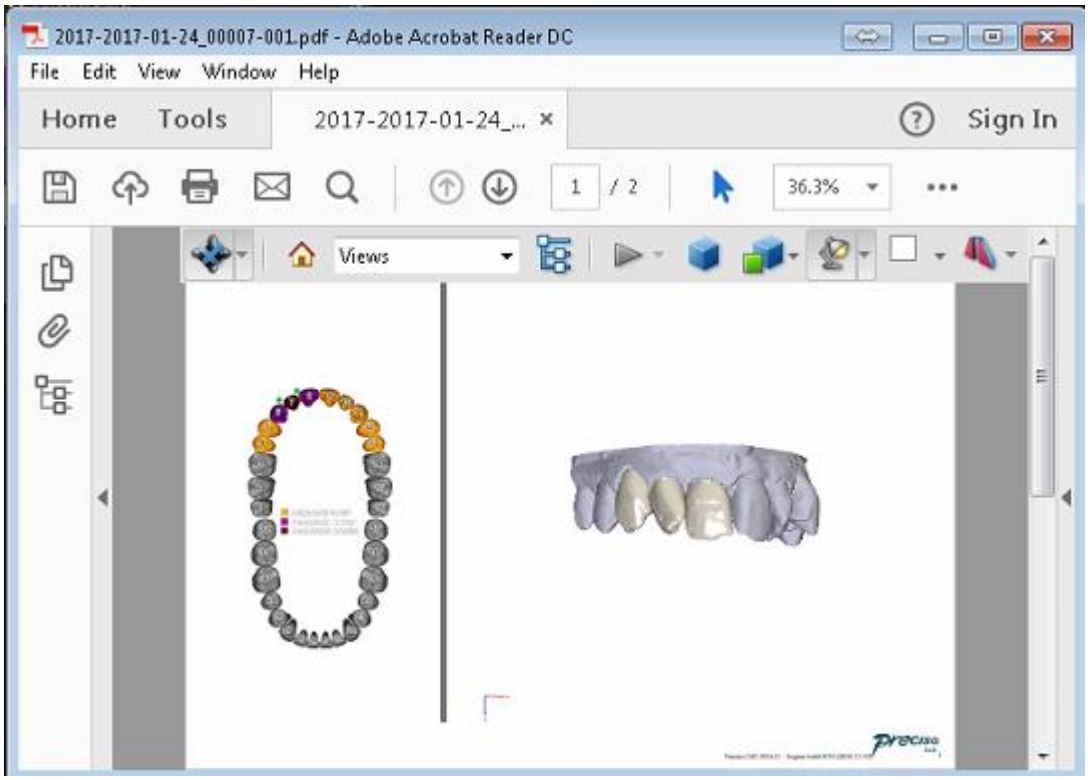


Select: Save scene as

Drop down Save as type and choose 3D PDF; the file name will default to the case name; rename if you'd like.

The default save location is the case folder; you'll want to email the pdf file to your dentist.





Further editing is possible e.g. changing the light source, annotations, cross section, highlighting etc.
